INTERMEDIATE FSMQ 6989

## **Mark Scheme and Report on the Unit**

---

**June 2008**

**6989/MS/R/08**

OCR (Oxford, Cambridge and RSA Examinations) is a unitary awarding body, established by the University of Cambridge Local Examinations Syndicate and the RSA Examinations Board in January 1998. OCR provides a full range of GCSE, A level, GNVQ, Key Skills and other qualifications for schools and colleges in the United Kingdom, including those previously provided by MEG and OCEAC. It is also responsible for developing new syllabuses to meet national requirements and the needs of students and teachers.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by Examiners. It does not indicate the details of the discussions which took place at an Examiners' meeting before marking commenced.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the Report on the Examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

# Foundations of Advanced Mathematics – 6989

## Report, June, 2008

There were 1300 entries for this session, a significant increase from previous years. The mean mark was 22.3. The minimum mark scored by 3 candidates was 6 and the maximum mark was 39, scored by 6 candidates.

There were 16 questions for which at least one candidate offered no answer but these were scattered throughout the paper so this did not provide any evidence that candidates found the paper too long.

Unusually, in Q3 (Electrician's charges) no candidate offered response A as an answer. In all other questions each of the distracting answers was selected by at least one candidate.

In 5 questions the wrong response was selected by more candidates than the right response, and in 11 others fewer than 50% chose the correct response.

Q22 (Indices) Only 39% of the candidature thought that  $2^3 \times 3^2 = 6^5$  was false, while 43% clearly found  $\frac{2^5 \times 3^4}{6^2 \times 9}$  hard to calculate and decided that it was not  $2^3$ .

Q27 (maximum and minimum values) Only 23% gave the correct response here, with 25% and 32% giving incorrect values. The idea of the least value of a fraction requiring the least numerator and greatest denominator is a concept that many have not grasped.

Q29 (Distance - time graph) This question required candidates to draw the line representing a journey on top of one already drawn to see where they intersected. The question stated explicitly that Bob left Queentown for Portville before Andy, riding from Portville to Queentown, had arrived, yet 43% of candidates thought that they did not pass each other. Although we do not have their graphs (which were drawn on the question paper which is not handed in) one must presume that the majority of these misread the question and thought that the two were travelling in the same direction.

Q34 (Solution sets to inequalities) Equal numbers chose the right answer and one of the wrong ones, but even more (37%) chose the response  $2 < n + 6 < 10 \Rightarrow -4 < n < 4$  as false.

Q40 (Probability) The non-replacement probability was chosen to be false by marginally more candidates than those choosing the correct response.

As in previous sessions I offer a summary of questions and topics with the approximate percentage of candidates giving the correct responses. I noted in my January report that the questions on trigonometry had not been answered well. The situation is no better this session!

Mark Scheme and Report on the Unit taken in June 2008

Question		Topic
91 – 100%	10	Statistics - pie chart
81 – 90%	1	Arithmetic
	5	Algebra
	12	Arithmetic - order of operations
71 - 80%	2	Arithmetic - decimal places and significant figures
	3	Arithmetic - electrician's charges
	6	Arithmetic
	8	Algebra - linear sequence
	13	Graphs - conversion graph
	25	Algebra - substitution of numbers into expressions
61 - 70%	4	Arithmetic - standard form
	11	Statistics - interpretation of bar chart
	19	Vectors
	20	Statistics - formation of frequency table
	30	Graphs - intersection of two lines, one of which had to be drawn
	37	Algebra - solution of equations
51 - 60%	14	Statistics - average and spread of grouped data
	16	Algebra - identities
	21	Algebra - powers
	26	Arithmetic - mensuration
	31	Algebra - solution of quadratic equations
	33	Algebra - solution of linear simultaneous equations
	36	Arithmetic - ratios
	38	Statistics - sampling
41 - 50%	7	Arithmetic - rounding of numbers
	9	Arithmetic - conversion of units
	17	Arithmetic - Pythagoras in a circle
	18	Algebra - rearranging formulae
	24	Graphs - completion of a cubic curve
	29	Graphs - time distance graph
	32	Algebra
31 - 40%	15	Trigonometry - sin and cosine rules
	22	Arithmetic - indices
	23	Algebra - simplification of an expression
	35	Trigonometry - Pythagoras in 3-D diagram
	39	Vectors
	40	Probability
21 - 30%	27	Arithmetic - maximum and minimum values
	28	Trigonometry - trig ratios of angles greater than $90^\circ$
	34	Algebra - solutions of inequalities

**Answers**

1	D	21	B
2	C	22	A
3	D	23	B
4	D	24	C
5	A	25	D
6	C	26	A
7	D	27	A
8	C	28	D
9	D	29	C
10	A	30	A
11	B	31	A
12	A	32	B
13	D	33	D
14	B	34	B
15	B	35	A
16	B	36	D
17	B	37	B
18	C	38	A
19	B	39	A
20	C	40	B

# Grade Thresholds

## Unit Threshold Marks June 2008

Unit	Maximum Mark	A	B	C	D	E	U
6989	40	32	28	24	20	16	0

The cumulative percentage of candidates awarded each grade was as follows:

	A	B	C	D	E	U	Total Number of Candidates
6989	8.8	21.1	42.1	65.1	85.5	100	1273
